

Position Announcement: Intern, Coastal Science & Engineering (CSE) (3 credits), open to all SEOE students

Coastal Science and Engineering, Inc. (CSE) is an award-winning team of scientists and engineers who specialize in solving problems in the coastal zone. The CSE team manages coastal environmental restorations and permitting for clients from New York to the Caribbean and has successfully placed over 40 million cubic yards of sand on over 75 miles of shoreline through more than 50 beach restoration projects.

As part of our efforts in planning for and monitoring projects we collect a great deal of elevation, geotechnical, and biological data. We are looking for a pair of motivated students who can assist our professionals in collecting and analyzing these data. Suitable candidates will possess strong technical skills, work ethic, and a willingness to learn.

We are looking for 2 students who have some experience in quantitative analysis or data entry, so the successful candidate will need to have successfully completed STAT 515 at minimum. Coursework in Coastal Processes or Physical Oceanography are considered highly beneficial for understanding the work involved with this position. Any previous experience in field-based research involving Marine Science, Oceanography, Geology, or similar subjects is also considered highly beneficial.

This position is scheduled for 20 hours per week for the semester. If you are interested, please submit a one-page statement of interest and one-page resume to Jacqueline McClary (SEOE Student Services Coordinator, mcclaryj@mailbox.sc.edu).
